

Grasslands ADVANCE tall fescue

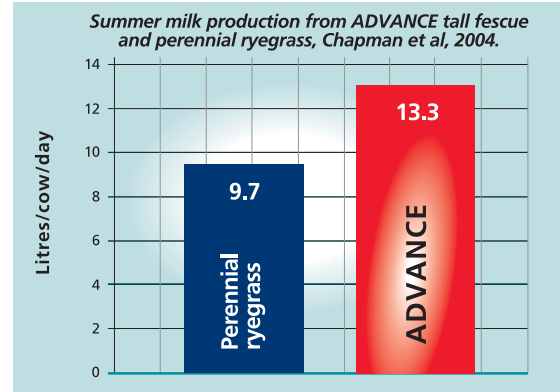

- ✓ Very high summer and autumn production
- ✓ Medium leaf size, low leaf strength for high animal acceptance
- ✓ Good cool season growth for a Continental type
- ✓ Late heading
- ✓ Available as **ADVANCE** or **ADVANCE MaxP®**

ADVANCE has changed the role of tall fescue through its ability to give excellent animal performance. ADVANCE was bred by AgResearch Grasslands for animal palatability, improved establishment vigour, and high dry matter production.

In hot environments, when some soil moisture is available, ADVANCE can continue to grow when ryegrass has gone into 'green drought' mode.

ADVANCE has been shown to increase cow milk production, especially over summer. It has also been successful as a high quality finishing pasture for lambs and cattle.

Companion species to use with ADVANCE

TRIBUTE white clover, WILL white clover, TONIC plantain, CHOICE chicory, COLENSO red clover
