

Jesup

Tall Fescue

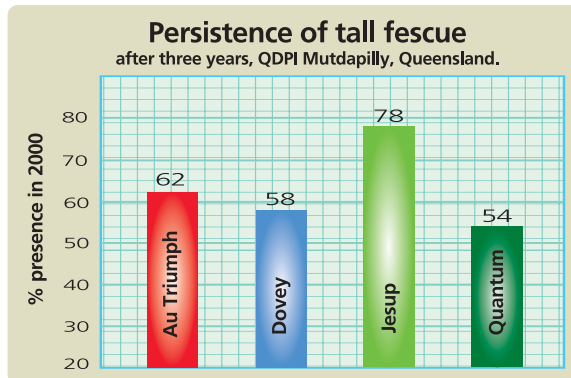

CONTINENTAL

JESUP MaxP[®] tall fescue

- ✓ Persistent and heat tolerant
- ✓ Fine-medium leaf, prostrate
- ✓ Mid-late heading
- ✓ MaxP[®] endophyte

JESUP MaxP[®] is a very persistent and heat tolerant tall fescue. Being a continental type it provides year-round production whenever soil moisture allows.

JESUP MaxP[®] is finer leaved and more densely tillered than standard tall fescues. It has good feed quality and palatability. JESUP MaxP[®] has been successful in harsher environments where other cultivars have failed to persist.

Jesup (without the MaxP[®] advantage) showed greater persistence than similar varieties. The MaxP[®] novel endophyte greatly enhances persistence and performance of this cultivar.

Companion species to use with JESUP
NUSIRAL white clover, TONIC plantain, CHOICE chicory
